DPE-400

By
DRS Laboratories, Inc.
PO Box 20247
Lehigh Valley, PA 18002-0247

On 21FEB2012 DRS Laboratories, Inc. performed a 24 hour continuous particulate test to verify DPE-400 will not compromise a controlled area particulate classification.

The DPE-400 under question was pulled from production line, final assembly, and performance tested. A test protocol was established and utilized for all performance tests. Individual sample volumes of 1M³ provide an acceptable test for particulates.

Test results indicate the DPE-400 is suitable for use and will not generate or add any maximum allowable particulates to compromise a Class 5 environment as per ISO 14644-1.

Detailed testing parameters and calibration sheets are available for review.
All tests and equipment utilized to perform compliance verification can be found in test report # 2012-DRS-0221.
